Investment focus

BB Biotech invests worldwide in fast growing companies developing and marketing innovative biotech drugs. At least 90% of its shareholdings must be in listed companies, while always holding more than 50% of its assets in equity investments. The target portfolio of BB Biotech will generally consist of 20 to 35 participations. Large positions will be taken in five to eight companies, the top holdings. Together they will account for no more than two-thirds of the portfolio and no single position will have a weighting greater than 25% of portfolio investments. Due to their substantial portfolio weighting, the top holdings should be generating both revenues and income. The portfolio's smaller participations are companies with promising drug candidates in their R&D pipelines. Investments are selected according to a thorough, multi-level due diligence process, with a particular focus placed on the analysis of financial parameters, the respective competitive environment, the development pipeline, the patent portfolio, and end-client perception. ESG factors are taken into consideration while implementing the aforementioned investment objectives.

Past performance is not a reliable indicator of future results and can be misleading. Changes in the rate of exchange may have an adverse effect on prices and incomes. All performance figures reflect the reinvestment of dividends and do not take into account the commissions and costs incurred on the issue and redemption of shares, if any. The reference benchmark is used for performance comparison purposes only (dividend reinvested). No benchmark is directly identical to the investment company, thus the performance of a benchmark is not a reliable indicator of future performance of BB Biotech it is compared to. There can be no assurance that a return will be achieved or that a substantial loss of capital will not be incurred.

Market commentary

In September BB Biotech's share price increased by 0.7% in CHF whereas the Net Asset Value decreased by 3.2% in USD. The Nasdaq Biotech Index was negative by -3.8% (in USD) in September.

In September we saw positive news from a number of the portfolio companies including Ionis, Alnylam and Neurocrine. Ionis showed positive topline Phase III results with its product candidate olezarsen, Alnylam announced positive Phase II data for its product candidate zilebesiran and a positive outcome of a FDA advisory panel meeting regarding patisiran. Neurocrine announced positive top-line data from a Phase III trial with its product candidate crinecerfont.

Please find below selected highlights from a few of BB Biotech's portfolio companies:

Ionis Pharmaceuticals (+12.6%, in USD) announced on September 28 positive topline results for the Phase III Balance study of olezarsen in people with familial chylomicronemia syndrome (FCS). The trial met its primary efficacy endpoint with a statistically significant reduction in triglyceride levels with olezarsen 80 mg monthly dose at six months compared to placebo. In addition, olezarsen 80 mg showed a 100% reduction in acute pancreatitis events compared to placebo, a key secondary endpoint.

Alnylam Pharmaceuticals (-10.5%, in USD) announced on September 7 that the KARDIA-1 Phase II study of zilebesiran, an investigational RNAi therapeutic targeting liver-expressed angiotensinogen (AGT) in development for the treatment of hypertension, met the primary endpoint demonstrating a dose-dependent, clinically significant reduction in 24-hour mean systolic blood pressure (SBP). The study also met key secondary endpoints. On September 13 Alnylam announced positive outcome of the FDA's Cardiovascular and Renal Drugs Advisory Committee (CRDAC) meeting to discuss the supplemental New Drug Application (sNDA) for patisiran, an investigational RNAi therapeutic in development for the treatment of the cardiomyopathy of transthyretin-mediated (ATTR) amyloidosis.

Neurocrine Biosciences (+3.3%, in USD) announced on September 12 positive top-line data from the Phase III CAHtalyt™ Adult Study evaluating the efficacy, safety, and tolerability of crinecerfont in adults with classic congenital adrenal hyperplasia (CAH) due to 21-hydroxylase deficiency (21-OHD).

Wave Life Sciences (+27.2%, in USD) announced on September 5 the submission of its first clinical trial application (CTA) for WVE-006 in alpha-1 antitrypsin deficiency (AATD). WVE-006 is a first-in-class, GalNAc-conjugated RNA editing oligonucleotide ("AlMer") and is designed to correct the single base mutation in messenger RNA (mRNA) coded by the SERPINA1 Z allele, thereby enabling restoration and circulation of functional, wild-type alpha-1 antitrypsin (M-AAT) protein.

Outlook

BB Biotech remains focused on value growth and is optimistic about fundamental progress achieved by innovative biotech companies in the large-, mid- and small-cap segments. We continue to believe that these companies are attractive investments.

For illustrative purposes only. Holdings and allocations are subject to change. Any reference to a specific company or security does not constitute a recommendation to buy, sell, hold or directly invest in the company or securities. Where the Sub-Fund is denominated in a currency other than an investor's base currency, changes in the rate of exchange may have an adverse effect on price and income.

Risk and return profile

The investment company's objective is to generate attractive and competitive capital growth in the long term. It is therefore particularly suited to investors with an investment horizon of at least 5 years who want to selectively diversify their portfolio with investments in the biotechnology sector and who are willing to accept the equity risks typical of this sector.

Target market

The investment company is suitable for retail and professional investors in Switzerland as well as for professional and semi-professional investors in Germany and professional investors in the UK.

Benefits

- Unique opportunity for European investors to access the global biotech sector, a non-cyclical growth industry that is strongly supported by increasing demand, driven by demographic trends and life style changes.
- New innovative drugs and technologies are powering sustainable momentum in the biotech sector.
- Focus on a diversified portfolio of profitable companies as well as small and midcap companies with strong pipelines.
- Management Team with strong scientific and medical expertise. Renowned Board of Directors.
- Attractive dividend policy; Dividend payment of 5% p.a.

Inherent risks

- BB Biotech invests in equities. Equities are subject to strong price fluctuations and so are also exposed to the risk of price losses.
- Biotech equities can be subject to sudden substantial price movements owing to market, sector or company factors.
- BB Biotech invests in foreign currencies, which means a corresponding degree of currency risk against the reference currency.
- The price investors pay or receive, like other listed shares, is determined by supply and demand and may be at a discount or premium to the underlying net asset value of the Company.
- BB Biotech may take a leverage of up to 15%, which may lead to even higher price movements compared to the underlying market.
