Investment focus

BB Biotech actively invests worldwide in fast growing companies developing and marketing innovative biotech drugs. At least 90% of its shareholdings must be in listed companies, while always holding more than 50% of its assets in equity investments. The target portfolio of BB Biotech will generally consist of 20 to 35 participations. Large positions will be taken in five to eight companies, the top holdings. Together they will account for no more than two-thirds of the portfolio and no single position will have a weighting greater than 25% of portfolio investments. Due to their substantial portfolio weighting, the top holdings should be generating both revenues and income. The portfolio's smaller participations are companies with promising drug candidates in their R&D pipelines. Investments are selected according to a thorough, multi-level due diligence process, with a particular focus placed on the analysis of financial parameters, the respective competitive environment, the development pipeline, the patent portfolio, and end-client perception. ESG factors are taken into consideration while implementing the aforementioned investment objectives.

Past performance is not a reliable indicator of future results and can be misleading. Changes in the rate of exchange may have an adverse effect on prices and incomes. All performance figures reflect the reinvestment of dividends and do not take into account the commissions and costs incurred on the issue and redemption of shares, if any. The reference benchmark is used for performance comparison purposes only (dividend reinvested). No benchmark is directly identical to the investment company, thus the performance of a benchmark is not a reliable indicator of future performance of BB Biotech it is compared to. There can be no assurance that a return will be achieved or that a substantial loss of capital will not be incurred.

Market commentary

In April BB Biotech's share price declined by 3.3% in CHF and the Net Asset Value increased by 3.4% in USD. The Nasdaq Biotech Index was positive by 0.4% in USD in April.

BB Biotech reported its first quarter results on April 25th. First quarter of 2025 was characterized by the elevated volatility across global financial markets, driven by increasing political uncertainty and evolving trade policies. Against the turbulent macroeconomic backdrop, the biotech sector faced a particularly challenging quarter. Healthcare policy uncertainties coupled with sustained market volatility continued to weigh heavily on the industry.

BB Biotech remains focused on its mission: to invest in companies developing breakthrough therapies that can transform patient outcomes. We remain committed to innovation while recognizing that the sector's fragile structural recovery requires heightened awareness of emerging risks.

BB Biotech reported a net loss of CHF 241 mn for the quarter and a payout of nearly CHF 100 mn in dividends in March compared to a net profit of CHF 260 mn in the first quarter last year.

In the first quarter we initiated a new position in Akero Therapeutics following the company's breakthrough Phase II results in patients with cirrhotic MASH. On the exit side, we closed our positions in Intra-Cellular, Fate Therapeutics, Sage Therapeutics and Arvinas.

The full quarterly report can be read here: <https://report.bbbiotech.ch/Q125/en>

Please find below selected highlights from a few of BB Biotech's portfolio companies:

Revolution Medicine (+14.2%, in USD) announced on April 27 new clinical data for zoldon-rasib in patients with KRAS G12D mutant non-small cell lung cancer. The results demonstrated acceptable safety and tolerability and encouraging initial antitumor activity in patients with non-small cell lung cancer.

Argenx (+9.0%, in USD) announced on April 10 that the FDA approved a new option to self-inject Vyvgart Hytrulo with a prefilled syringe for the treatment of adult patients with generalized myasthenia gravis. On April 28 Argenx announced that the Committee for Medicinal Products for Human Use (CHMP) of the European Medicines Agency (EMA) has recommended European Commission (EC) approval of Vyvgart for the treatment of adult patients with progressive or relapsing active chronic inflammatory demyelinating polyradiculoneuropathy (CIPD) after prior treatment with corticosteroids or immunoglobulins.

Alnylam (-2.5%, in USD) announced April 28 that the Committee for Medicinal Products for Human Use (CHMP) recommends approval of Vutrisiran for the treatment of ATTR-CM (hereditary transthyretin amyloidosis in adult patients with cardiomyopathy). Vutrisiran is currently approved in the European Union under the brand name Amvuttra for the treatment of hATTR (hereditary transthyretin-mediated amyloidosis with polyneuropathy).

Benefits

- Unique opportunity for European investors to access the global biotech sector, a non-cyclical growth industry that is strongly supported by increasing demand, driven by demographic trends and life style changes.
- New innovative drugs and technologies are powering sustainable momentum in the biotech sector.
- Focus on a diversified portfolio of profitable companies as well as small and midcap companies with strong pipelines.
- Management Team with strong scientific and medical expertise. Renowned Board of Directors.
- Attractive dividend policy; Dividend payment of 5% p.a.

Inherent risks

- BB Biotech actively invests in equities. Equities are subject to strong price fluctuations and so are also exposed to the risk of price losses.
- Biotech equities can be subject to sudden substantial price movements owing to market, sector or company factors.
- BB Biotech invests in foreign currencies, which means a corresponding degree of currency risk against the reference currency.
- The price investors pay or receive, like other listed shares, is determined by supply and demand and may be at a discount or premium to the underlying net asset value of the Company.
- BB Biotech may take a leverage of up to 15%, which may lead to even higher price movements compared to the underlying market.
